Chatting with a text model in the Playground before you use the API

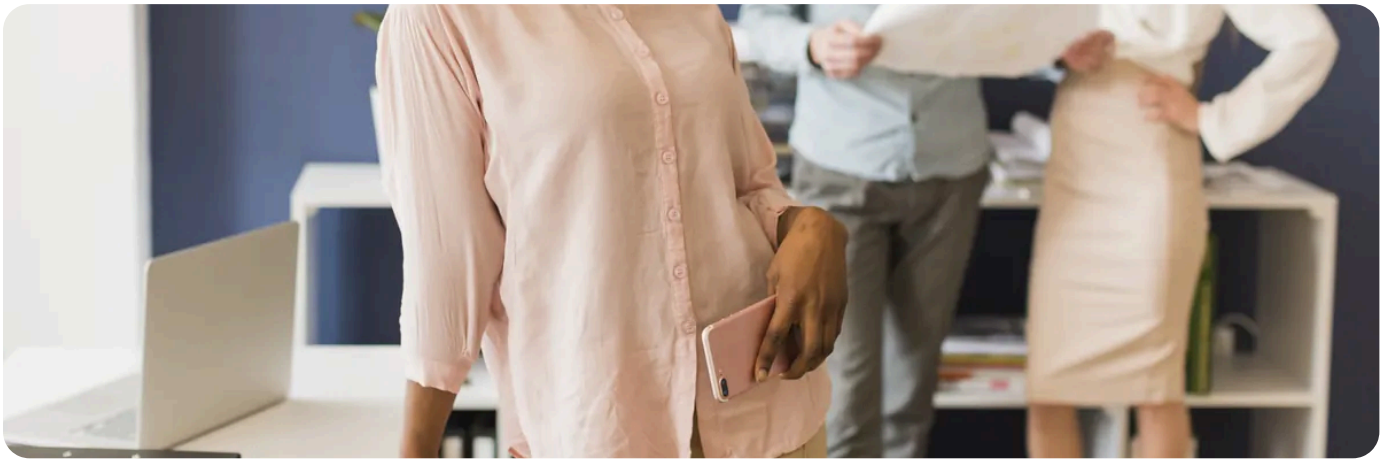
All in One AI Created on **November 26, 2026** 2 min read



In short: the **Playground** is a chat inside All in One AI. You pick a text model, type and read the reply. Before you send, the page shows how much the request may cost. Use it to compare models and polish your prompt before you put AI into your own software. There is more on text models on the **Chat and text** page.

Your first conversation

1. In Meu MozOut, open All in One AI and the **Playground** tab. It opens in **Chat** mode.
2. Choose the model. You can search for it by name or by id.
3. Type your message. For example: "Write a welcome line for a bakery's website."
4. If you like, change the **maximum tokens in the reply**. A lower value gives shorter replies and lowers the maximum cost.
5. Check the maximum cost, shown before you send, and click **Send**. If the reply is heading the wrong way, click **Stop**.

At the end you see the real cost, which is usually lower than the maximum. You only pay for what was used. See **how each request is charged**.

Your conversations are kept

Each conversation is saved under **Conversations**, where you can search, open, rename or delete it. To start from scratch, click **New conversation**. A very long conversation gets expensive, because the model rereads all of it for each reply. When the page warns you it is too long, start a new one. See **why the AI forgets what you said earlier**.

Trying it at no cost

Choose **Sandbox (free)** and the reply becomes a test answer: no model is called and no credits are used. It shows you the screen working. To see what the model really answers, use the normal mode.

The Playground uses your account credits, just like the API.
Its requests show in History as "All in One AI Playground". And always check what the AI writes before you use it: see **how to check an answer**.

Found the right model and prompt? Move to the API with the same model id. See **using the OpenAI SDK**.

RECOMMENDED

Try a text model in the Playground.

Open the Playground →
