How much disk space you are using: the cPanel sidebar, Disk Usage and the usage page

 cPanel & WHM  Created on **October 19, 2026**  Updated on **October 21, 2026**  6 min read

The short answer: there are three places, and each answers one question. The cPanel **Statistics sidebar** tells you **how much** you use and what the limit is. The **Disk Usage** screen tells you **where** that space is, folder by folder, with e-mail and databases listed separately. And the **usage page in My MozOut**, which appears once you pass 75%, tells you **how close to the limit** you are and lets you upgrade from the same page. This article shows you how to find and read all three. To clean up, the next step is **what to delete first**.

Where to see each thing

What you want to know	Where to look	What you will see
How much you use, and the plan limit	cPanel, the Statistics sidebar, the Disk Usage line	Space used, the limit, and a bar with the percentage.
Which folders weigh the most	cPanel, Files section, Disk Usage	The account folders by size, plus separate lines for e-mail, e-mail archives, mailing lists and databases.
How much each mailbox weighs	cPanel, Email Accounts	For each mailbox, the space used and the quota you gave it.
How much the databases weigh	The Statistics sidebar, the MySQL Disk Usage line; and MySQL Databases	The total for all databases and the size of each one: the database has grown .
How close to the limit, outside cPanel	The service page in My MozOut, or the link in the warning e-mail	The usage bar, the Upgrade button and the Check now button.
Exact figures, folder by folder	The cPanel Terminal or SSH	The read-only commands further down.

cPanel menu names change slightly with the version and the panel language: look for the meaning, and type the name into the cPanel search box if you cannot spot it.

➞ **Checking your space, step by step**

- 1

Sign in to the account's cPanel (if you are not sure which login that is, see **which login you need**).
- 2

Look at the Statistics sidebar. The Disk Usage line shows what you use and the limit, as a bar with your plan's limit beside it. On a narrow screen, such as a phone, this column moves to the bottom of the page. Write the figure down: it is your starting point.
- 3

Open Disk Usage. The table at the top lists the account's main folders and, separately, e-mail and databases. Find the biggest line: the problem is nearly always there.
- 4

Drill into the biggest folder. In the folder browser further down the same screen, sort by size and open the heavy folder until you reach the one that matters. How to read this screen in detail is in **finding what fills your account**.
- 5

If the biggest line is e-mail, open **Email Accounts** and look at the space each mailbox uses. Mailboxes of people who have left the company are usually at the top.
- 6

Check in My MozOut. If usage has passed 75%, the service page shows the banner with the See the account usage button. After cleaning up, use **Check now** to measure again instead of waiting for the next warning.

On the service page in My MozOut (Services, the service), once usage passes 75% a banner appears with the usage and a **See the account usage** button. It opens a page with the usage bar, **Upgrade** and **Check now**. The link in our warning e-mails opens that same page.

With the cPanel Terminal or SSH (the cPanel Terminal), these commands only read, they delete nothing. The first gives the account total; the second, the weight of e-mail, the site and the File Manager trash; the third, the ten heaviest e-mail folders (each mailbox has its own):

```
du -sh ~  
du -sh ~/mail ~/public_html ~/.trash 2>/dev/null  
du -h -d 2 ~/mail | sort -h | tail -10
```

❓ **How to read the figure**

What you see	What it means	What to do
Below 75% of the limit	You get no usage warnings.	Nothing urgent. Check the figure once a month to know how fast it grows.

What you see	What it means	What to do
75% to 85%	One warning every 15 days, and the banner appears on the service page.	See what grew: clutter or real growth?
85% to 95%	A warning every 7 days.	Clean up this week, or decide on the upgrade.
95% or more	A warning every 3 days.	Act today: you are very close to the limit.
100%: the limit	The site can no longer save and mailboxes stop accepting new messages. Above the limit the account may be suspended, and we always warn you the day before.	Upgrade (the account reactivates right after) or ask for 24 hours to sort it out, through the link in the e-mail (once every 7 days): what the warnings mean .
The three places show different figures	Each screen measures at a different time, and Disk Usage warns that its values may lag behind.	Wait a little and open it again. In My MozOut, use Check now.
You deleted files and the total did not drop	What you delete in the File Manager goes to the hidden .trash folder and still counts.	Empty the trash from the File Manager itself.

 Optimise or upgrade?

Situation	Optimise or upgrade?
The biggest line is a backup, an old folder or the trash	Optimise. Download and delete, and it is done.
The biggest line is e-mail, with years of Trash and Spam	Optimise. Your mailbox is full.
Space grows every month with photos, products and documents the site uses	Upgrade. That is growth, not clutter.
You have cleaned up and the figure passes 85% again within weeks	Upgrade.

 Bigger plans

Plan	Space (NVMe SSD)
Pro	10 GB
Plus	20 GB

Plan	Space (NVMe SSD)
Ultra	30 GB
Business Pro	50 GB
Business Plus	100 GB
Business Ultra	200 GB

Space on each plan, all on NVMe SSD: from **10 GB on Pro** to **200 GB on Business Ultra** (table above). After the upgrade, the new limit shows straight away in the Statistics sidebar. You upgrade in My MozOut, pay only the difference up to the renewal date, and the site, the e-mail and the files stay where they are: **how to upgrade your plan**. Which step to pick: **which hosting plan comes next**.

**Looking is not deleting.**

Before you delete what you found, take a copy and download it (**making a full cPanel backup**), and do not leave it inside the account: it takes the very space you want to free. Never delete the mail, etc or ssl folders, or the whole public_html.

**Note the figure on the first day of each month.**

With three or four figures in a row you know whether space grows slowly (and when you will need an upgrade) or jumped (and then there is a cause with a date to look for).

 NEED A HAND?

Cannot tell what is filling the account? Open a support ticket with what Disk Usage shows for the three biggest lines.
