The API for resellers and agencies: account, reseller programs and what the API does not cover

WhatsApp & APIs Created on **November 13, 2026** 2 min read

The short answer: for resellers and anyone managing client websites, the API handles what is **in your account**: domains, DNS, hosting, mailboxes, invoices and support tickets. With `reseller:read` you also see your reseller programs and reseller hosting accounts. What the API does **not** do is touch the accounts your clients have inside your reseller plan.

What the reseller area shows

Operation	What it returns
`GET /v1/reseller`	Which reseller programs the account has: domains, SMS and hosting, with the status of each.
`GET /v1/reseller/services`	Reseller hosting accounts, in pages.
`GET /v1/reseller/services/{id}`	One of them. Access details never come through the API: you see them in Meu MozOut, at `manage_url`.

These operations only read, and only show what belongs to this account.

What the API does not cover

Your own clients:
The API neither shows nor changes them. Accounts created inside a reseller hosting account are managed in that account's panel (WHM), not through our API. Write access for the reseller area (`reseller:write`) has no operations yet.

An agency's working day, through the API

Task	Operation	Permission
Check whether the client's name is free, and the price	`GET /v1/domains/availability`	`domains:read`
Register the domain, paid from credit	`POST /v1/domains/register`	`domains:write` and `billing:purchase`
Point DNS at the client's site	`POST /v1/domains/{domain}/dns`	`dns:write`
Add the domain to one of your hosting plans	`POST /v1/services/{id}/addon-domains`	`hosting:write`
Create the client's mailboxes	`POST /v1/services/{id}/email/mailboxes`	`email:write`
Request the free SSL certificate	`POST /v1/services/{id}/ssl/autossl`	`hosting:write`
Renew the domain every year	`POST /v1/domains/{domain}/renew`	`domains:write` and `billing:purchase`

The details of each step are in the article for each area: **domains**, **DNS**, **hosting** and **e-mail**.

The account, contacts and users

With `account:read`, `GET /v1/account` returns the name, company, e-mail, address, currency and status of the account, but never passwords or card details. `GET /v1/account/contacts` and `GET /v1/account/users` return the contacts and the people with access (the owner first, with `owner` set to `true`). Changing the account and contacts is still done in Meu MozOut.

Organise keys by task, not by client:
One purchasing key with a spending limit, another for DNS and e-mail with no sensitive permissions, another read-only for reports. Reseller domain prices come from the **price catalogue**, and reseller hosting is on the **reseller** page.

RECOMMENDED

Reselling domains or hosting? See the API page and automate the repetitive work for your clients.

See the API page →

SEE ALSO

- Domains through the API: checking a name, registering, renewing and transferring with credit
- DNS through the API: adding, changing and deleting records, and restoring a zone backup
- Hosting e-mail through the API: mailboxes, passwords, quotas, forwarders and the default address
- Hosting through the API: subdomains, databases, cron jobs, SSL, PHP options and FTP
- Sensitive API permissions and the spending limit: paying, buying, reinstalling, cPanel access
- Catalogue and extras through the API: showing prices on your site and buying SSL or SiteLock
