What a chat request costs through the API: the reservation, max_tokens and the final adjustment

All in One AI Created on **November 26, 2026** 2 min read

In short: before calling the model, we reserve credits for the worst case. At the end we charge for the tokens actually used and return the rest to your balance. What weighs most in the reservation is `max_tokens`, so always set it.

The three steps of every request

1. **The reservation.** We count the input (about one token for every 3 characters) plus `max_tokens` of output. Without `max_tokens`, the reservation counts 4096 output tokens.

2. **Your balance is checked.** If it does not cover the reservation, the answer is `402` with `insufficient_credits` and nothing is charged. If it does, the model replies.

3. **The adjustment.** We charge for the real tokens, reported in `usage`, and the rest of the reservation goes back to your balance.

An example with numbers

With a model at 56 credits per million input tokens and 112 per million output tokens, a request with 1000 input tokens and 500 output tokens costs 0.056 + 0.056 = 0.112 credits. It is rounded up to 0.12. The minimum per request is 0.01 credits. Each model's real prices are on the Models tab.

When you get a 402

The error includes `details.required`, what the reservation needed, and `details.balance`, what you have. There are two ways out: **buy credits** or lower `max_tokens`. The reply often fits in far less than 4096.

When streaming, ask for the count.

With `stream: true`, the token count comes in the last event. If the model does not send it, the whole reservation is charged. Always send `stream_options` with `include_usage`. See **showing the reply as it is written**.

Where to see what you spent

On the History tab of All in One AI, each request shows the model, the key, the input, output and cached tokens, and the credits spent. Through the API, your balance comes from `GET /v1/ai/balance`. See also **tokens explained**.

To spend less:

Keep conversations and instructions short, and use the cheapest model that does the job. Before a big batch, check your balance and the model's price.

RECOMMENDED
