What an AI agent costs, and how to test it without spending

All in One AI Created on **November 26, 2026** 2 min read

An agent has no price of its own. You pay for the model it uses, in AI credits, at the price shown in `GET /v1/models`. Each round trip to the model spends credits like a chat request.

What goes into each answer

Part	How it counts
Instructions and knowledge	Input tokens, on every request
The conversation messages	Input tokens
The answer	Output tokens
Each use of a tool	One more call to the model, which also carries the text of the ones before

So an answer that uses two tools makes three calls to the model and costs more than one without tools. To understand tokens, see **tokens explained**.

Reservation and settlement

1. Before calling the model, we reserve credits for the input and for the `max_tokens` of output. Without `max_tokens`, the reservation counts 4096 output tokens.

2. If your balance does not cover the reservation, the answer is `402 insufficient_credits` and nothing is charged.

3 At the end, we charge the real tokens and return the rest of the reservation to your balance. The minimum per request is 0.01 credits.

Testing for free, and testing for real

Way	Spends credits?	What it is for
A `sandbox_` key	No	Writing and testing your program. The agent answers in the same format but does not call the model or the tools: the text is always "Resposta de teste (sandbox)."
The Try it button	Yes	Seeing the agent's real answers, with the cost of each one. The requests show up in the history as the All in One AI Playground.

How to keep the bill down

1 Keep the instructions and the knowledge short. They go with every answer. See **what to add to the knowledge**.

2 Set `max_tokens`. It caps the answer length and lowers the reservation, which avoids a `402` when your balance is low.

3 Turn on only the tools the agent needs.

4 For simple questions, choose a cheaper model. Each model's price is in `GET /v1/models`, in the `pricing` field.

Before you open the agent to many people,
check your balance with `GET /v1/ai/balance` or in **All in One AI**, and ask half a dozen questions in Try it to see what a normal conversation costs.

RECOMMENDED

Want an agent whose costs you control? Visit the AI agents page.
