Which models to use in Cursor: Kimi K2.7 Code, DeepSeek V4 Pro, GLM 5.2 and others

Cursor Created on **November 28, 2026** 2 min read

Any text model in the catalogue works in Cursor's chat. For coding, you want a model built for it that supports tools. These are the ones we recommend and how to choose between them.

The recommended models

Model	Context	What for
`moonshotai/kimi-k2.7-code`	262,144 tokens	Built for coding: the starting point for everyday work.
`deepseek-ai/deepseek-v4-pro`	1,048,576 tokens	Strong reasoning, for big changes and hard bugs.
`zai-org/glm-5.2`	1,048,576 tokens	Made for agents: handles tools well in long tasks.
`deepseek-ai/deepseek-v4-flash`	1,048,576 tokens	Fast and cheap, for background tasks and short questions.

All four support tools (function calling) and are part of the Coding Plan. Each one's context, maximum output and price are in `GET /v1/models`, in the `context_length`, `max_output_tokens` and `pricing` fields.

How to choose

1. For everyday work, start with `moonshotai/kimi-k2.7-code`.
2. For a big change or a hard bug, switch to `deepseek-ai/deepseek-v4-pro`.

3 For long tasks, where the agent uses many tools in a row, try `zai-org/glm-5.2`.

4 For short questions and small tasks, `deepseek-ai/deepseek-v4-flash` is fast and cheap.

In Cursor, you switch models in the chat selector, in the middle of your work. Tab does not change: it always stays on Cursor's models.

The price

Each model has its own price in credits per million input and output tokens. See it on the **Models tab** or in the `pricing` field. With the Coding Plan, requests to the plan's models spend points instead of credits, and stronger models spend more points per token. The list of plan models is on the **Plan tab**.

Other models

The catalogue has 79 text models that support tools. The full list, from the most expensive to the cheapest, is in the **OpenCode article**. To add any of them to Cursor, see **how to add more models**.

Use the cheapest model that does the job. A strong model on a simple question costs more without giving a better answer.

RECOMMENDED

Want our models in Cursor? Visit the Coding with AI page.
